Healthcare Quality Improvement

01
Identify a gap

02
Understand the current process

03
Test a focused change

04
Measure the result

05
Adopt, adapt or retest

Trainees should actively participate in at least one quality improvement or patient safety project.

Dimensions of Healthcare Quality

SAFE

Avoid preventable harm during care.

EFFECTIVE

Use evidence and provide interventions with a clear clinical benefit.

PERSON-CENTERED

Respond to patient needs, values and informed choices.

TIMELY

Reduce harmful delays in assessment and treatment.

EFFICIENT

Use time, supplies and services responsibly.

EQUITABLE

Provide consistent quality without unfair variation.

How Quality Improvement Works

- Understand the problem, the people affected and the current process.
- Define a specific improvement aim and select measures that show change over time.
- Design and test changes on a small scale using the Plan-Do-Study-Act cycle.
- Improve reliability by standardizing successful processes and addressing variation.
- Engage staff and patients, then monitor whether improvement is sustained.
