Patient Safety

VERIFY

Confirm patient identity, procedure, site, allergies and required precautions.

COMMUNICATE

Use structured handover and closed-loop communication for critical information.

ESCALATE

Stop and seek help when a condition changes or a situation exceeds your competence.

REPORT

Report incidents, near misses and hazards through the approved system.

Everyday Patient Safety Practices

PATIENT IDENTIFICATION

Use at least two approved identifiers before care, medication or specimen collection.

SAFE COMMUNICATION

Use SBAR, read-back and closed-loop communication for critical information.

PROCEDURE SAFETY

Complete required verification, time-out and site confirmation.

FALL AND PRESSURE RISK

Assess risk and apply the approved prevention plan.

DETERIORATION

Recognize warning signs and activate the escalation pathway early.

LEARNING CULTURE

Report near misses and hazards so the system can improve.
